Responsive Web Page Tutorial – Part 2

Now you are required to make the web page responsive. Add the empty media query to the bottom of your styles.css file.

```
/* media queries */
/* viewport hits 550px apply diferent style to the elements in the query */
@media only screen and (max-width: 550px) {

}
```

Task: Now add the required styles within the media query so that your page looks like figure 1 below when the width of the viewport changes to 550px.
